## SUMMARY

---

Business analytics professional at a data center company with hands-on experience building Excel and Power BI reports and dashboards that track operational metrics and give leadership clear visibility. Strong in analyzing operational data to spot trends and gaps, preparing data-backed summaries for reviews, and improving efficiency through reporting automation. Detail-oriented, organized, and comfortable managing multiple priorities in a fast-paced environment.

## WORK EXPERIENCE

---

### Equinix

January 2025 – May 2026

#### *Customer Engineer, Analytics*

##### *Operational Metrics Dashboard — Product Engineering*

- Built a centralized, real-time Power BI dashboard with DAX measures tracking ticket volume, age, and priority across the full product line, giving support leadership a single live view of the queue.
- Added multi-dimensional filtering (age, priority, customer tier) so leadership could pinpoint which products and customer segments consumed the most support resources.
- Maintained the dashboard to correlate case spikes with system outages, making the link between incidents and queue overflow visible so teams could reallocate resources proactively.
- Modeled raw case data into clean KPI tables that surfaced high-volume products and recurring issue types for cross-team triage.

##### *Reporting Automation — Technical Account Manager Churn Analysis*

- Built an interactive Power BI dashboard combining customer sentiment and operational metrics with automated reporting, cutting manual report generation time by ~60%.
- Created real-time tracking of customer feedback trends and open support cases, giving account managers an at-a-glance read on which accounts were trending toward churn.
- Improved & maintained a Power BI dashboard and built custom DAX measures that surfaced churn signals and sentiment shifts hidden in the raw case data.

##### *Customer Engineering — Power BI dashboard*

- Built an interactive Power BI dashboard tracking average case resolution time and weekly case volume, with drill-down from weekly to quarterly and yearly views for trend analysis.
- Added agent-level performance tracking — case totals by day, quarter, and year — giving leadership clear visibility into individual and team throughput.
- Structured the underlying data model by product type, case priority, and case age, so leadership could filter to where resolution bottlenecks were forming.

##### *Customer Engineering*

- Resolved 1,000+ customer tickets spanning abuse cases, DDoS mitigation, and BGP requests, troubleshooting complex networking issues directly with customers.
- Wrote internal documentation for customer-case handling and server troubleshooting assisted new-hire onboarding.

## SKILLS

---

**Reporting & BI:** Advanced Excel (formulas, pivot tables), Power BI, DAX, Tableau

**Data & Querying:** SQL, MySQL, SQL Server Management Studio, Python

**Tools:** Microsoft Office, Salesforce, Jira, Confluence, Git, Linux

**Python Libraries:** Pandas, NumPy, Matplotlib, Seaborn

## EDUCATION

---

**University of Texas at Dallas** — Richardson, TX

December 2024

*B.S., Business Analytics & Artificial Intelligence*

**Relevant coursework:** Big Data Analytics, Foundations of Business Intelligence, Data Visualization, Database Fundamentals, Business Analytics, Object-Oriented Programming with Python
